

## Quick Start Guide: Nonnanest Baby Monitor

**Your baby's comfort and safety are our top priority. Nonnanest sets up in under 5 minutes — no WiFi, no apps, just peace of mind.**

### 1. Mount the Camera Above the Crib

- Use the included screws to mount the camera securely on the wall, **at least 3 feet (1 meter) directly above the crib**. To ensure the most accurate **skin temperature sensing**, keep the camera **within 3.5 feet (1.1 meters)** of the crib.  
*Why?* This position ensures accurate temperature monitoring and a full view of your baby.

 *Tip: A wall-mounted view gives the clearest, uninterrupted picture.*

---

### 2. Power On Both Devices

- Plug in the camera and the handheld monitor using the included power adapters.
- The camera powers on automatically.
- Hold the monitor's **Power button** for 3 seconds to turn it on.

 *Pull out the monitor's antenna for stronger signal reception.*

---

### 3. Automatic Pairing (It Just Works)

- Your monitor and camera will pair automatically within moments.
- If they don't, press the **Menu (OK/M)** button on the monitor, select **Camera**, and follow the on-screen steps.

 *No WiFi needed. Nonnanest uses secure FHSS technology to protect your privacy.*

---

### 4. Adjust the View and Settings

- Use the **PTZ** and arrow keys to pan, tilt, or zoom the camera until your baby is fully in frame.
- Adjust **brightness, volume, and screen preferences** using the monitor buttons.

🌙 *Night Vision turns on automatically in the dark.*

## 5. You're All Set — Start Monitoring

- Keep the monitor nearby so you can hear and see your baby clearly.
- Use features like **Two-Way Talk**, **Lullabies**, and **Temperature Alerts** for added reassurance.

**Need help?** Our support team is here for you.  
Sleep easier — Nonnanest is watching over what matters most.

### 🔧 Camera Placement Tips (Safety First)

- **Mount Above the Crib:** Use the included screws to secure the camera on a wall at least 3 feet (1 meter) directly above your baby.
- **Or Use a Stand:** Nonnanest includes a **universal female screw hole** — compatible with most baby monitor stands or flexible crib mounts.
- **Avoid Heat Sources:** *Never place the crib or camera directly near a heating or cooling vent.* Sudden temperature changes can affect readings and your baby's comfort.
- **Secure All Cords:** Always keep power cords **safely out of baby's reach** and never inside the crib. Use cord clips or covers as needed.

💡 *Clear view, stable mount, safe setup — for worry-free monitoring.*
